Intuitive configuration interface containing powerful options.

Configure accessible destinations on a per profile basis.

Simplified input with data driven pre-populated controls and type-ahead lookups.

Easy to configure

Synchronize your organizations AFAS Profit / AFAS Online dossier items and destinations by the click of a button. Decide what items should be available to the user on a per profile basis and chose amongst available destinations and extra fields. Support of the eCopy™ ShareScan® Document naming functions permits flexible file naming options.

Chose between a range of authentication modes such as runtime authentication, create fast work-flows utilizing a configured service account and express destinations. Combine eCopy™ ShareScan® session logon functionality with AFAS Windows authentication and gain a complete audit trail.

Easy to use

The clean and intuitive user interface makes the workflow a clear and straightforward user experience. Multilingual client user interface eliminates any language barriers.

On demand population of selection controls and type-ahead functionality when searching for entities in AFAS Profit / AFAS Online minimizes the time spent by the user to enter information at the scanning device.

Easy communication

No matter whether the targeted AFAS environment is an on-site installation or hosted in the cloud, AFAS connector for eCopy™ ShareScan® makes access possible by utilizing the AFAS Profit Web Services API for all communication.

Web service communication allows you to reap the benefits of system isolation and real-time access to data simultaneously.
